

MANAGEMENT’S DISCUSSION AND ANALYSIS (“MD&A”)

For The Three And Nine Month Period Ended September 30, 2015

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

Basis of Presentation:

The following discussion of the financial condition and results of operations of Noble Iron Inc. ("Noble Iron" or the "Company") should be read in conjunction with the Company's unaudited interim condensed consolidated financial statements for the 9 month periods ended September 30, 2015 and September 30, 2014, which were prepared under International Financial Reporting Standards ("IFRS") using the Company's functional currency of Canadian dollars. This MD&A has been prepared as of November 12, 2015 to help investors understand the financial performance of the Company and to provide information that management believes is relevant to an assessment and understanding of the business, risks, opportunities and performance measures of the Company. We have prepared this document in conjunction with our broader responsibilities for the accuracy and reliability of the financial statements and the development and maintenance of appropriate internal controls in our efforts to ensure that the financial information is complete and reliable. The Audit Committee of the Company's Board of Directors has reviewed this document and all other publicly reported financial information for integrity, usefulness and consistency.

Additional information about Noble Iron, including copies of the Company's continuous disclosure materials, is available at www.nobleiron.com or on SEDAR at www.sedar.com. Noble Iron maintains its registered head office in Ontario, Canada, with executive management based in California and Texas, USA. Noble Iron's Investor Relations department can be reached at 1-281-443-7667. The information on the Company's website is not considered to be a part of this MD&A.

Forward-Looking Statements:

This document may contain forward-looking statements that reflect Noble Iron's current expectations regarding future events. The forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "plan", "estimate", "expect", "intend" and statements that an event or result "may", "will", "should", "could" or "might" occur or be achieved and other similar expressions. These forward-looking statements involve risk and uncertainties, including the difficulty in predicting acceptance of and demands for new products and services, the impact of the products, services and pricing strategies of competitors, delays in developing and launching new products and services, fluctuations in operating results and other risks, any of which could cause actual results, performance, or achievements to differ materially from the results discussed or implied in the forward-looking statements. There are many inherent risks in the industries in which Noble Iron operates; some are more specific to the Company. The reader should consult Noble Iron's ongoing quarterly filings for additional information on risks and uncertainties relating to these forward-looking statements. The reader should not place undue reliance on any forward-looking statements. Management assumes no obligation to update or alter any forward-looking statements whether as a result of new information, further events or otherwise, unless required by law.

Non-IFRS Measures:

The term "Adjusted EBITDA" refers to net earnings (loss) before interest expense, income taxes, depreciation, amortization, acquisition expenses, stock-based compensation, severances, and foreign exchange. The Company believes that Adjusted EBITDA is useful supplemental information as it provides an indication of the results generated by the Company's main business activities prior to taking into consideration how those activities are financed and taxed and also prior to taking into consideration the other items listed above.

Overview:

Noble Iron (symbol "NIR") operates in equipment rental, equipment sales, and software for construction and industrial equipment users.

Noble Iron's equipment rental and dealership business operates under the name "Noble Iron", and currently serves customers in California and Texas. Noble Iron offers construction and industrial equipment and accessories for rent and for sale, and is an exclusive distributor of LiuGong Construction Machinery earth moving equipment and Allied Construction Products in Southeast Texas.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

Noble Iron's software division operates under the name "Texada Software". Texada Software offers in-the-cloud or client-based software for equipment rental companies, equipment dealerships, construction companies, contractors, and customers who own or use construction or industrial equipment. Texada Software develops software applications to manage the equipment ownership lifecycle, including equipment purchasing; rental and sales transactions; inventory management; maintenance and depreciation tracking; used equipment sales, disposal and inventory replenishment.

The Company is subject to a number of risks and uncertainties associated with the achievement of sustainable profitability and with the financing requirements of its operations. The Company has incurred net losses and used significant cash in its operating activities since incorporation. It has relied upon financing to fund its operations and to establish its infrastructure, primarily through debt and private equity placements.

The Company anticipates raising additional funds to finance its objectives beyond the next 12 months. If the Company is unable to obtain sufficient additional financing, planned operations could be delayed or scaled-back, which could affect the Company's financial condition and results of operations and/or its ability to meet the debt covenants under its credit facilities.

Recent Developments:

On January 1, 2014, Nabil Kassam, previously the Company's Founder & Executive Chairman, was appointed to the role of Founder, Chairman & CEO following his election to the Board of Directors.

On October 24, 2014, the Company closed a non-brokered private placement of 6,000,000 common shares at a price of \$1.00 per share for gross proceeds of \$6.0 million. The proceeds are for growth and development initiatives, including equipment financing, real estate consolidation, technology development and recruiting talent.

Description of Noble Iron's Business:

Noble Iron engages in equipment rentals and sales, as well as providing software to the construction and industrial equipment industry.

Noble Iron's equipment rental and sales business operates under the name "Noble Iron", and currently serves customers in California and Texas. Noble Iron offers construction and industrial equipment and accessories for rent and for sale, and is the exclusive distributor of LiuGong Construction Machinery equipment in Southeast Texas for earth moving equipment.

Noble Iron's software division operates under the name "Texada Software". Texada Software develops software applications to manage the complete equipment ownership lifecycle: from equipment purchasing; rental and sales transactions; inventory management; maintenance and depreciation tracking; through to used equipment sales, disposal and inventory replenishment. Texada Software offers in-the-cloud or client-based software, and is scalable to meet the needs of any equipment rental company, dealership, construction company, contractor, and any customer who owns or uses construction or industrial equipment.

Construction and Industrial Equipment Rental and Distribution

Established in August 2011, the Company's Southern California operations serve two major Metropolitan Statistical Areas in the United States, including Los Angeles and Riverside-San Bernardino.

In July 2012, the Company expanded its construction and industrial equipment rental operations to the market surrounding Houston, Texas.

The Company's construction and industrial equipment rental operations deploy a fleet comprised of aerial, forklift, heavy construction and light compact construction equipment. Segment revenues consist of equipment rental revenue along with other associated revenues such as, equipment protection fees, environmental fees and delivery charges. Other

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

ancillary revenues include fuel sales, parts sales and proceeds from the disposition of rental fleet as part of the Company's capital expenditure and replenishment plan.

On May 15, 2012, Noble Iron announced the launch of its dealership offering, as well as a dealership agreement with exclusive territory rights to represent and distribute LiuGong Construction Machinery in the 20 counties that make up the greater Houston, Texas, market. As part of the exclusive territory rights agreement, the Company was required to make an initial fleet purchase, as well as make minimum unit purchases during the succeeding two years of the multi-year agreement. The Company met this purchase requirement for 2013 and 2014.

Enterprise Asset Management Software

The software segment's revenues are derived from license revenues, which include server license fees, user license fees, Software as a Service ("SaaS") subscription fees, contract development, and upgrade fees. In addition to these fees, the segment generates maintenance and service revenue. The products are generally licensed under single-year or multi-year terms, both of which are arranged to automatically renew. Maintenance fee arrangements generally include ongoing customer support and rights to certain product updates. Service revenue consists of professional fees charged for product training, consulting, implementation, and programming services. Contract revenue is derived from contracts for the development of custom applications. Customers typically purchase a combination of software, maintenance, and professional services.

Other

In conjunction with its foray directly into renting equipment in 2011, the Company launched a proactive project and implementation plan for Noble Interactive Customer Care ("NiCC"). NiCC is a proprietary technology architecture that integrates call center interactions as well as a variety of other processes unique to the Company.

Noble Iron's Markets:

Construction and Industrial Equipment Rental and Distribution

The equipment rental market consists of companies renting various types of construction and industrial equipment, on both short and long-term contracts, in return for rental fees. The rental industry remains highly fragmented and consists of a small number of multi-location, regional or national rental houses, as well as a large number of small independent businesses serving discrete local markets. Equipment rental and sales activity is impacted by a broad range of economic factors, including residential and non-residential construction trends, infrastructure investment and maintenance, as well as overall economic activity.

Construction and industrial equipment is largely provided to end users through two channels: equipment rental companies and equipment dealers. Examples of other national rental equipment companies include United Rentals, Hertz Equipment Rental and Sunbelt Rentals.

Management estimates that the total North American construction and industrial related equipment rental market could exceed \$42 billion in 2015 based on third party research, including that of the American Rental Association ("ARA"). According to the ARA, the equipment rental industry experienced approximately 7.3% growth during the calendar year 2014.

The Company currently operates in the heavy and light construction equipment rental and distribution markets. The majority of its rental fleet is comprised of aerial reach, forklift and earth moving equipment. The heavy and light construction equipment rental market consists of equipment with a significant capital cost and is deployed primarily to professional contractors to meet the demands of their construction projects. Customers in this market are generally repeat customers with longstanding relationships with equipment rental companies and, in some instances, may have contractual supply arrangements for certain types of equipment.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

Enterprise Asset Management Software

Customers in the North American construction equipment rental sector currently account for approximately 90% of the Company's software revenue. It is estimated there are more than 30,000 companies worldwide that rent various types of equipment, 12,000 of which conduct business in the United States and Canada.

The market for rental management software has existed for over 30 years, and management estimates its growth at generally less than 10% per year. Management estimates there are more than 200 providers of rental management software to the three primary segments of the rental market. Most companies in this sector are private companies making it difficult to accurately assess the market at this time. We estimate that the Company's software business is currently the second largest provider of ERP software to the rental sector.

Seasonality and Other Factors Affecting the Variability of Results and Financial Condition:

Revenues within the Company's construction and industrial equipment rental and distribution segment may be seasonal. Demand for construction and rental equipment generally increases during temperate weather months and typically slows during storm and snow seasons. The Company's enterprise asset management software segment revenue is largely generated from recurring fees, which are earned equally throughout the year. As such, seasonality is not a material factor within the segment.

Our results of operations for interim periods and for full fiscal years are also impacted by the variability of certain factors including, but not limited to: changes in demand of construction and industrial activity, our customers' decision to rent equipment rather than buy equipment (which is impacted by customers' forecasted equipment utilization rates as well as available financing and interest rates), and weather variability outside of normal seasons. Revenue fluctuations in the Company's enterprise asset management software business are also affected by one-time large upfront license sales. These initial license sales may result in more revenue being generated in some quarters over subsequent quarters, and is not necessarily indicative of detrimental business performance in subsequent quarters; following an initial one-time licence sale to a customer, the Company's ongoing revenue for support agreements increases, and the customer is likely to eventually convert to the Company's SaaS subscription offering, which increases the Company's overall recurring revenue.

Energy costs in the Company's results of operations are also affected by fluctuations in the price of oil, which influences transportation costs. Fluctuations in commodity prices of metals, such as iron and copper, influence pricing of our parts and equipment from suppliers and therefore also impacts the Company's purchase costs. In addition, the effect of asset write-downs, including provisions for bad debts and impairment of assets can affect the variability of our results.

Management decisions to consolidate or reorganize operations, including the closure of facilities, may result in significant restructuring costs in an interim or annual period.

Nine Months of 2015 and 2014 Business Developments:

Company Results

Over the course of 2014 and the first nine months of 2015, the Company focused on building scalable operating processes and capabilities, investing in the Company's management and operating teams, and developing proprietary technology. The Company did not make significant equipment fleet investments during 2014 or the first nine months of 2015, as management focused primarily on solidifying the Company's operating platform.

The Company also embarked upon significant change, real estate consolidation and reorganization initiatives within its construction and industrial equipment rental and distribution segment. In May of 2014, the Company began a process of consolidating its four Southern California locations (Ventura, San Diego, Riverside, and Long Beach) into a single facility in Pico Rivera, which is close to the centre of Los Angeles. The Construction and Industrial Equipment Rental

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

and Distribution segment operated under unusual circumstances during 2014 and the first three quarters of 2015, as the consolidation initiative involved general business disruption and significant employee turnover, with approximately 73% of the employees at the Company's Southern California operations being new hires during 2014. Management believes that the consolidation of the Company's Southern California operations, which is primarily completed, will result in considerable efficiency improvements.

The Company had a challenging environment in Texas in May 2015 due to record rainfall which decreased construction activity. As weather returned to normal in June, activity levels picked up. The downturn in the energy sector had no direct impact on the Company as it is not engaged in the rental of specific oil and gas equipment. However, continued weakness in the energy sector may cause general weakness in local construction trends which could negatively impact equipment rental demand in the area.

Objectives of the Company's Software segment in 2014 and the nine months of 2015 included migrating existing customers from customized software products to the current standard version, converting on-premise software clients to Texada's SaaS cloud-based offering, as well as developing specific software products, mobile applications and support capabilities for the Company's rental and dealership operations. These new software applications are intended to be developed for the Company's internal operations, and are also planned to be deployed to external software customers over the course of 2015.

Interim Condensed Consolidated Financial Results

Restatement: The Company identified four items during 2014 that required correction in 2013 and 2012. These restatements were corrected and noted in the Company's annual audited consolidated financial statements for the years ended December 31, 2014 and 2013 (the "2014 Annual Financial Statements") and are repeated here:

- During 2014, the Company determined that certain equipment was being depreciated at an inappropriate accelerated rate. This resulted in an overstatement of depreciation of \$0.5 million as at December 31, 2013 and \$0.06 million as at December 31, 2012. The Company corrected the depreciation calculation and corrected the overstatement by reversing depreciation of \$0.5 million for the year ended December 31, 2013 and \$0.06 million as at December 31, 2012.
- As at December 31, 2013, the Company failed to recognize a state tax benefit associated with certain deductible temporary differences. The deferred tax liability as at December 31, 2013 was overstated by \$0.3 million and the related deferred tax recovery for the year ended December 31, 2013 was understated by the same amount. As a result of the depreciation correction described above, the deferred tax liability as at December 31, 2013 was understated by \$0.2 million and the deferred tax recovery was overstated by the same amount. The Company made a correction to the December 31, 2013 financial statements for these items.
- As a result of not accruing for state income tax, the income tax recovery was overstated by \$0.02 million and accounts payable and accrued liabilities were understated by the same amount as at December 31, 2013.
- During the year ended December 31, 2012, the Company completed a business acquisition and in conjunction with that transaction entered into an operating real estate lease with a purchase option to acquire the Company's premises in Houston, TX. The Company incorrectly recognized the purchase option as an intangible asset with a value of \$0.5 million as part of the business acquisition accounting, together with a related deferred tax liability of \$0.2 million and a resulting gain on fair value increment of \$0.2 million. In order to correct the accounting, the Company recognized property and equipment of \$0.1 million, reversed deferred income tax expense recovery of \$0.2 million and reversed a fair value incremental gain on acquisition of \$0.2 million. Related amortization expense of the lease purchase option was reversed in the amounts of \$0.05 million and \$0.07 million during the years ended December 31, 2012 and December 31, 2013, respectively.

The above changes have been recorded retrospectively in the financial statements. See Note 4 to the 2014 Annual Financial Statements.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

The following table summarizes the Company's interim condensed consolidated results for the nine months ended and three month period ended September 30, 2015 and 2014, respectively. Further details of the Company's financial and operating results are provided within the subsequent discussion of Segmented Results.

Noble Iron recorded revenues of \$19.5 million and \$16.1 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in an increase of 21% or \$3.4 million. These increases can be primarily attributed to the strengthening of the US dollar versus the Canadian dollar totalling \$2.1 million, higher rental revenues totalling \$1.1 million, and higher sales of software licenses and conversions of existing customers from on-premise to the Company's SaaS software offering totalling \$0.2 million.

For the third quarter of 2015, Noble Iron recorded revenues of \$7.3 million as compared to \$5.8 million for the three months ended September 30, 2014 resulting in an increase of 26% or \$1.5 million. These increases can be primarily attributed to the strengthening of the US dollar versus the Canadian dollar totalling \$0.9 million, higher rental revenues totalling \$0.7 million offset by a slight decrease in revenue in the Enterprise Asset Management Software segment of \$0.1 million.

Noble Iron recorded cost of revenue of \$8.7 million and \$6.6 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in an increase of 32% or \$2.1 million. For the third quarter of 2015, Noble Iron recorded cost of revenues of \$3.1 million as compared to \$2.4 million for the three months ended September 30, 2014, respectively, resulting in an increase of 30% or \$0.7 million. Both yearly and quarterly increases are primarily attributed to an increase in depreciation of \$1.4 million and \$0.5 million for the nine months and three months, respectively, ended September 30, 2015, as a result of the addition of equipment fleet during the second half of 2014, which caused an increase in depreciation during the first nine months of 2015, a \$0.3 million and a \$0.05 million increase in expenses of third party equipment rental expenses in the respective periods, as well as the strengthening of the US dollar versus the Canadian dollar.

Noble Iron recorded expenses, excluding cost of revenue, of \$18.3 million and \$13.7 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in an increase of 33% or \$4.6 million for the nine months ended September 30, 2015. This increase was primarily due to a \$1.3 million increase in support, maintenance, and delivery expense within the Company's construction and industrial equipment rental and distribution operations, a \$1.5 million increase in general and administration expense, a \$0.9 million increase in income tax expense, a \$0.6 million increase in sales and marketing expense, a \$0.1 million increase in research and development expense, and a \$0.2 million increase in foreign exchange loss. The increase in expenses was largely due to increases in rental activities, the strengthening of the US dollar versus the Canadian dollar, real estate consolidation and reorganization initiatives, hiring and expansion of the Company's core team, and increased investment in technology and process development. Further detail is outlined in the segmented sections of this MD&A. Overall, the third quarter of 2015 compares favorably to the first and second quarters of 2015 as the reorganization process in Southern California wound down.

For the third quarter of 2015, Noble Iron recorded expenses, excluding cost of revenue, of \$6.4 million compared to \$4.9 million for the three months ended September 30, 2014, resulting in an increase of 30% or \$1.5 million. This increase

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

was primarily due to a \$0.5 million increase in support, maintenance, and delivery expense within the Company's construction and industrial equipment rental and distribution operations, a \$0.6 million increase in general and administration expense, a \$0.3 million increase in sales and marketing expense, and a \$0.1 million increase in income tax expense. The increase in expenses was largely due to increases in rental activities, strengthening of the US dollar versus the Canadian dollar, real estate consolidation and reorganization initiatives, hiring and expansion of the Company's core team, and increased investment in technology and process development. Further detail is outlined in the segmented sections of this MD&A

Noble Iron recorded a net loss of \$7.4 million and \$4.1 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in a decline in profits of \$3.3 million. For the third quarter of 2015, Noble Iron recorded a net loss of \$2.3 million compared to a net loss of \$1.6 million for the three months ended September 30, 2014, resulting in a decline in profits of \$0.7 million. The increased losses can be attributed to higher expenses as previously described and income tax expenses versus recoveries last year.

Noble Iron recorded Adjusted EBITDA of \$0.6 million and \$1.3 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in a decline of Adjusted EBITDA of \$0.7 million. For the third quarter of 2015, Noble Iron recorded Adjusted EBITDA of \$0.5 million compared to \$0.4 million for the three months ended September 30, 2014, resulting in an increase in Adjusted EBITDA of \$0.1 million. Overall, adjusted EBITDA in the third quarter of 2015 continued to improve compared to the first and second quarters of 2015 as the reorganization process in Southern California began to wind down.

For the nine months ended September 30, 2015 and 2014, the Company spent \$0.3 million and \$4.5 million on capital expenditures, respectively, resulting in a \$4.2 million decrease. The Company chose to focus on deploying its existing equipment fleet during the first three quarters of 2015 in order to increase utilization rates versus increasing capacity. The Company also chose to invest in repairs and maintenance programs to maintain the useful life of the fleet, rather than dispose of assets with the aim of acquiring newer fleet.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

Segmented Results:

Construction and Industrial Equipment Rental and Distribution

The Company currently operates construction and industrial equipment rental and distribution operations in two major markets, Southern California and Southeastern Texas.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

The Construction and Industrial Equipment Rental and Distribution segment recorded revenues of \$16.0 million and \$12.8 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in an increase of 25% or \$3.2 million. Our Southern California and Houston operations' revenue increased by \$1.5 million and decreased \$0.4 million respectively for the nine months ended September 30, 2015 excluding the effect of the strengthening US dollar. Southern California revenue increased due to increased rental of third party equipment, higher utilization of existing fleet, increased fleet sales, and operational efficiencies from the reorganization to a central location. Houston revenues declined due to unusually wet weather in first half of 2015 which temporarily reduced construction activity. The remaining increase of \$2.1 million is a direct result of the strengthening US dollar versus the Canadian dollar.

For the third quarter of 2015, the Construction and Industrial Equipment Rental and Distribution segment recorded revenues of \$6.2 million compared to \$4.6 million for the three months ended September 30, 2014, resulting in an increase of 36% or \$1.6 million. This increase was primarily due to the strengthening of the US dollar versus the Canadian dollar totalling \$1.0 million and revenue increases in our Southern California operations by \$1.1 million as a result of higher run rates and a greater proportion of third party equipment rentals and fleet sales. This revenue increase was offset by a \$0.4 million decrease in the Houston market when comparing the three months ended September 2015 to the three months ended September 2014, which had been a record for the Company. Revenue in the Houston market increased 35% sequentially.

The Construction and Industrial Equipment Rental and Distribution segment recorded cost of revenue of \$8.2 million and \$6.2 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in an increase of 34% or \$2.1 million. This increase was due to a \$1.4 million increase in depreciation resulting primarily from the strengthening of the US dollar versus the Canadian dollar along with an increase in cost of \$0.4 million for rental of third party equipment and \$0.3 million of costs related to the sale of used equipment.

For the third quarter of 2015, the Construction and Industrial Equipment Rental and Distribution segment recorded cost of revenue of \$3.0 million compared to \$2.3 million for the three months ended September 30, 2014, resulting in an increase of 30% or \$0.7 million. This increase was primarily due to a \$0.5 million increase in depreciation resulting from the strengthening of the US dollar versus the Canadian dollar totalling \$0.3 million and the remaining increase due to additional rental fleet added in the second half of 2014 causing an increase to depreciation expense. The remaining increase in cost of revenue resulted from a \$0.2 million increase in costs related to the rental of third party equipment.

The Construction and Industrial Equipment Rental and Distribution segment recorded expenses, excluding cost of revenue, of \$11.9 million and \$8.7 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in an increase of 38% or \$3.3 million. This increase was primarily due to a \$1.2 million increase in support, maintenance, and delivery expense, \$0.8 million increase in income tax expense as a result of no recoveries in 2015, \$0.7 million increase in general and administration expense, and \$0.4 million increase in sales and marketing expense. Overall, the third quarter of 2015 compares favorably to the first and second quarters of 2015 as the reorganization process in Southern California wound down.

For the third quarter of 2015, Construction and Industrial Equipment Rental and Distribution segment recorded expenses, excluding cost of revenue, of \$4.4 million compared to \$3.1 million for the three months ended September 30, 2014, resulting in an increase of 41% or \$1.3 million. This increase was primarily due to a \$0.5 million increase in support, maintenance, and delivery expense, a \$0.1 million in income tax expense, a \$0.2 million increase in sales and marketing expense, and a \$0.4 million increase in general and administration expense. The majority of the increase was primarily due to the strengthening of the US dollar versus the Canadian dollar totalling \$0.6 million across the aforementioned categories with the remaining portion attributable to the additional costs associated with the Company's consolidation and reorganization of its Southern California operations.

The Construction and Industrial Equipment Rental and Distribution segment recorded a net loss of \$4.2 million and \$2.0 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in a decline in profits of \$2.2 million. This was primarily due to the increase in repair and refurbishment costs on its existing equipment, higher expenses during the Company's consolidation and reorganization of its Southern California operations, higher depreciation, and an increase in income tax expense as a result of no recoveries in 2015.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

For the third quarter of 2015, the Construction and Industrial Equipment Rental and Distribution segment recorded a net loss of \$1.2 million compared to a net loss of \$0.8 million for the three months ended September 30, 2014, resulting in a decline of profits of \$0.3 million. This was primarily due to the Company's consolidation and reorganization of its Southern California operations, and an increase in income tax expense as a result of no recoveries in 2015.

For the nine months ended September 30, 2015 and 2014, the Construction and Industrial Equipment Rental and Distribution segment recorded Adjusted EBITDA of \$3.0 million and \$2.8 million, respectively, resulting in an increase to Adjusted EBITDA of \$0.2 million.

For the third quarter of 2015, the Construction and Industrial Equipment Rental and Distribution segment recorded Adjusted EBITDA of \$1.3 million compared to \$1.0 million for the three months ended September 30, 2014, resulting in an increase in Adjusted EBITDA of \$0.3 million.

Income Tax (Recovery) Expense	169	149	13%	7	13	(46%)
Interest Expense	19	41	(54%)	5	15	(67%)
Foreign Exchange (Gain) / Loss	289	(79)	(466%)	148	91	63%
Adjusted EBITDA	\$918	\$861	7%	\$159	\$314	(49%)

The Enterprise Asset Management Software segment recorded revenues of \$3.6 million and \$3.4 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in an increase of 5% or \$0.2 million. Yearly increases can be primarily attributed to higher sales of software licenses and conversions of existing customers from on-premise to the Company's SaaS software offering.

For the third quarter of 2015, the Enterprise Asset Management Software segment recorded revenues of \$1.0 million compared to \$1.2 million for the three months ended September 30, 2014, resulting in a decrease of 12% or \$0.1 million. Decreases were due to the uneven timing of the conversion of customers and service requests and maintenance projects.

The Enterprise Asset Management Software segment recorded cost of revenue of \$0.4 million for each of the nine months ended September 30, 2015 and 2014. For each of the third quarter of 2015 and the third quarter of 2014, the Enterprise Asset Management Software segment recorded cost of revenues of \$0.1 million. Cost remained relatively unchanged.

The Enterprise Asset Management Software segment recorded expenses, excluding cost of revenue, of \$2.8 million and \$2.3 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in an increase of \$0.4 million. The increase in expenses was largely due to an increase in foreign exchange losses of \$0.4 million as well as a \$0.1 million increase in research and development expenses to develop new applications, and an increase to sales and marketing of \$0.1 million, partially offset by lower general and administrative of \$0.2 million. For each of the third quarter of 2015 and the third quarter of 2014, the Enterprise Asset Management Software segment recorded expenses of \$0.9 million. Expenses remained relatively unchanged.

The Enterprise Asset Management Software segment recorded a net income of \$0.3 million and \$0.6 million for the nine months ended September 30, 2015 and 2014, respectively, resulting in a decrease of \$0.3 million. Higher revenues of \$0.2 million were offset by a \$0.4 million increase in foreign exchange losses and \$0.1 million increase in research and development expenses on new applications and a decrease in general and administrative costs of \$0.2 million. For the third quarter of 2015, the Enterprise Asset Management Software segment recorded net loss of \$0.04 million compared to profit of \$0.15 million for the three months ended September 30, 2014, resulting in a \$0.19 million decrease. The quarterly decline can be primarily attributed to higher sales and marketing expenses of \$0.1 million and an increase in foreign exchange losses of \$0.1 million and uneven timing of service and maintenance revenues.

For each of the nine months ended September 30, 2015 and 2014, the Enterprise Asset Management Software segment recorded Adjusted EBITDA of \$0.9 million which was relatively unchanged from the prior year. For the third quarter of 2015, Enterprise Asset Management Software segment recorded Adjusted EBITDA of \$0.2 million compared to \$0.3 million for the three months ended September 30, 2014, resulting in a \$0.1 million decrease.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

Other

In addition to expenses incurred within its two operating segments, the Company incurs certain expenses that are presented in this MD&A as "Other". These expenses include costs associated with public entity management, corporate level management, technology and process development, Company-wide training, branding, trademark and intellectual property, and other ancillary costs required to support operating segments. "Other" was previously called RAO (revenue assistance operations). A summary of these expenses follows:

Comparative Financial Results (000's) - Other	Nine Months Ended			Three Months Ended		
	September 30, 2015	September 30, 2014	Percentage Change	September 30, 2015	September 30, 2014	Percentage Change
Expenses						
Support, Maintenance and Delivery	\$1	\$0	-	\$0	\$0	-
Sales and Marketing	(68)	(42)	62%	(11)	(14)	(21%)
General and Administration	(3,505)	(2,498)	40%	(1,080)	(886)	22%
Interest Expense	0	5	(100%)	0	2	(100%)
Foreign Exchange (Loss)	0	(177)	(100%)	0	0	
Total Expenses	(\$3,572)	(\$2,712)	32%	(\$1,091)	(\$898)	21%

Overall, "Other" expenses are primarily the result of continued investment in the infrastructure and tools required to support Noble Iron's corporate functions and the operating business model, including further development of Noble Iron's Interactive Customer Care platform, additional software applications, development of strategic partnerships and data and analytics capabilities.

For the nine months ended September 30, 2015 and 2014, "Other" recorded general and administration expense of \$3.6 million and \$2.7 million, respectively, resulting in a \$0.9 million (32%) increase. This increase was primarily due to the strengthening of the US dollar versus the Canadian dollar, increases in professional fees accrual from audit, tax, and legal fees, and an increase in wages and benefits, and an increase in software development costs. This was partially offset by a decrease in office expenses.

For the three months ended September 30, 2015 and 2014, "Other" recorded general and administration expenses of \$1.1 million and \$0.9 million, respectively, resulting in a \$0.2 million (21%) increase. This increase was primarily due to the strengthening of the US dollar versus the Canadian dollar, increases in wages and benefits, increases in professional fees, and an increase in software development costs, partially offset by decrease in other expenses.

Liquidity:

Liquidity risk is the risk the Company will not be able to meet its obligations as they become due. The Company manages its liquidity risk through cash and debt management.

The Company manages liquidity by assessing future cash flow requirements and maintaining sufficient borrowing base availability against the Company's debt facilities. Cash flow estimates are based upon rolling forecasts that consider borrowing limits, cash restrictions and compliance with debt covenants. No fixed payments are required over the term of the loans. Payments are required to be made when the outstanding advance exceeds the Borrowing Base. The Borrowing Base is largely determined by the fair market value of the equipment fleet as estimated by a third party valuator and as a result, any amount due within the next twelve months cannot be estimated reliably. Cash, which is surplus to working capital requirements is typically held as deposits, in both US and Canadian funds, with larger financial institutions.

Cash Flow:

During the nine months ended September 30, 2015, the Company's cash balance decreased by approximately \$2.0 million, primarily due to \$2.7 million of repayment and servicing of debt and \$0.2 million of cash flow used in operations. This was partially offset by approximately \$0.9 million of net cash flow from investing activities, primarily due to the disposal of rental equipment. The Company is optimizing its fleet portfolio with strategically balancing the purchase of new equipment with the refurbishment of existing equipment and the disposal of older fleet. As the Company was undergoing the consolidation in Southern California in late 2014 and early 2015, disposals were deferred to the second half of 2015. New fleet was added at the end of 2014 and no new fleet was acquired in 2015.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

During the nine months ended September 30, 2014, the Company's cash balance decreased by \$2.1 million primarily due to \$3.8 million in investing activities for the purchase of property and equipment, and \$0.1 million in repayment and servicing of debt. This was partially offset by \$1.8 million of from operations.

As of September 30, 2015, the Company had cash of \$0.1 million and working capital of \$2.7 million compared to cash of \$2.1 million and working capital of \$3.5 million at December 31, 2014.

Capital Resources:

The Company's two rental and distribution operations are supported by separate credit facilities from a single lender which include a continuing first charge security interest in all of the assets of Noble Rents Inc. and Noble Rents (TX) Inc. Availability under each facility is subject to a borrowing base as determined by the value of rental fleet and accounts receivable. There are no required fixed principal payments under the four year facilities, although payments are required to be made when the outstanding advance exceeds the Borrowing Base. Interest is charged on a floating basis using the 1-month LIBOR rate, plus a spread ranging from 225 to 275 basis points. The Company has provided a corporate guarantee to the lender that is also supported by a pledge of the Company's common shares in the respective borrower.

The combined loan balance outstanding under the facilities as of September 30, 2015 was \$33.3 million (approximately \$24.8 million US as at September 30, 2015). The facilities contain covenants requiring Noble Rents Inc. and Noble Rents (TX) Inc. to maintain certain financial covenants. This includes fixed charge coverage and certain liquidity ratios. As of September 30, 2015, Noble Rents Inc. and Noble Rents (TX) Inc. were in compliance with all of the loan covenants.

As of September 30, 2015, the Company had available unused approved credit facilities (operating, capital, and others combined) of \$16.6 million (approximately \$12.4 million US as at September 30, 2015) subject to borrowing base requirements. The total excess amount above the amount drawn and the Company's borrowing base was approximately \$2.8 million. Borrowing Base availability is subject to additional thresholds. The net availability above the 8.01% weighted average borrowing base covenant threshold was approximately \$0.4 million.

The lender has also made available to the Company standby letter of credit facilities, subject to borrowing base availability, with a limit of \$5.4 million (approximately \$4.0 million US as at September 30, 2015). No letters of credit were drawn by the Company as of September 30, 2015. The facilities also contain covenants specifying a minimum fixed charge coverage ratio, minimum availability requirements and a restriction on dividends to shareholders.

Equipment is often procured from manufacturers who offer an extended period before payment is due. During this extended payment period, equipment payables due for these fleet purchases are recorded as Other Current Liabilities. Due to temporary timing differences associated with receipt of fleet purchases and their subsequent financing by existing borrowing facilities, these current equipment payables will then be converted to long-term debt under existing borrowing facilities. As of September 30, 2015, equipment payable was nil compared to \$0.5 million as of December 31, 2014. The equipment payable is secured by the associated assets purchased.

Off-Balance Sheet Arrangements:

During the nine months ended September 30, 2015 the Company did not participate in any off-balance sheet arrangements.

Transactions between Related Parties:

At September 30, 2015, there is a loan outstanding to a former officer of the Company with a balance due to Noble Iron of \$0.01 million.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

Changes in Accounting Policies:

The significant accounting policies used in preparing the Interim Financial Statements are unchanged from those disclosed in the 2014 Annual Financial Statements except for the review, assessment, and implementation of new IFRS pronouncements prospectively adopted in its financial statements for the annual period beginning on January 1, 2014. The adoption of these pronouncements did not have a material impact on the financial statements. Further details can be found in the 2014 Annual Financial Statements.

Financial Instruments:

The Company is exposed to certain risks related to its financial instruments during its normal course of business including, but not limited to: liquidity risk, foreign currency risk, interest rate risk, and credit risk. Noble Iron's financial instruments are detailed below. Noble Iron manages these financial instruments to support the Company's strategy for growth and ongoing operations.

The Company's short-term financial assets include cash, accounts receivable, and loan receivable, and management has determined that the carrying value of these assets approximates the fair value at the reporting date.

The carrying amount of the Company's short-term financial liabilities include accounts payable, accrued liabilities, other current liabilities, and short term debt. Management has determined that the carrying value approximates the fair value at the reporting date.

Management has determined that the carrying value of the Company's long-term debt and license obligation approximates the fair value using the present value of future principal and interest payments discounted at market-based interest rates available to the Company for similar debt instruments with similar maturities at the reporting date.

Risks and Uncertainties:

Noble Iron's management team is responsible for the evaluation and management of risk factors affecting the Company. The following is management's assessment of the significant risks which would have the greatest impact on the Company over the ensuing 12 to 18 months given currently available information. This analysis contains forward-looking statements that may differ materially from actual results.

Liquidity Risk

Liquidity continues to be a risk for the Company as it continues to grow and deploy the Noble Iron business model. On August 26, 2015, the Company extended its \$25 million credit facility for the Southern California operations with a new maturity date of May 31, 2017. The line of credit will continue to provide working capital liquidity for the Company's Southern California operations. There can be no assurances that future renewals (i.e., after May 2017) will be available on terms acceptable to the Company, or at all. Furthermore, there can be no assurances that the Company's resources, combined with cash generated from future operations, will be adequate to continue funding operations, which includes the funding needed to sustain and grow the business.

Revenue and Collection Risk

The Company has a large number of customers with relatively small account balances which exposes the Company to aggregate billing and collection risk. These risks can include missed billings, unwarranted credits, additional time to collect payments and greater risk of customer default. Continual process improvements are made to ensure timely collection of the Company's accounts receivable. These efforts include the positioning of resources and technology to improve the efficiency of invoicing, collections and customer credit extension.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

Technology and Software Development

The process of developing technology from concept stage, through to design and final production involves time to complete testing, redesign and adoption by customers. Unexpected testing results or performance irregularities are normal in a development process and can result in new product offerings being delayed beyond projected time frames or slow adoption from customers. The risk of not developing and introducing reliable products, on a timely basis, presents a risk to the Company's software business.

Reliance on Key Personnel

The success of Noble Iron depends on the abilities, experience, efforts and knowledge of their respective senior management and other key employees, including its ability to retain and attract skilled management and employees. The loss of services from key personnel could have a material adverse effect on Noble Iron's business, financial condition, results of operations or future prospects, particularly since the Company does not always enter into non-competition arrangements with senior management and other key employees. In addition, the growth plans described in this MD&A may require additional employees, increase the demand on management, and produce risks in both productivity and retention levels. Noble Iron may not be able to attract and retain additional qualified management and employees as needed in the future. There can be no assurance Noble Iron will be able to effectively manage its growth, and any failure to do so could have a material adverse effect on its business, financial condition, results of operations and future prospects.

Foreign Currency and Exchange Risk

Foreign currency risk in the exchange rates between the Canadian dollar and foreign currencies could affect the Company's operating and financial results. The Company is exposed to foreign currency risk as substantially all of its assets and liabilities are denominated in foreign currency, particularly the US dollar. In addition, approximately 80% of its revenues are transacted in US dollars. Future growth of the Company is expected to be in US dollar denominated assets and or transactions. To date, the Company has funded its growth by issuing equity in Canadian funds and raising debt in US dollars. The Company's management monitors exchange rate fluctuations and presently does not use any derivative instruments to manage foreign currency exposure. As the Company continues to grow its US operations, exposure to foreign currency risk may increase with the likelihood of the Company employing exchange rate derivative instruments.

Asset and Leverage Risk

The integration and sustained growth initiative of the Company's operations into the construction and industrial equipment rental business poses risks that include, but are not limited to: considerable financial leverage, debt repayment requirements relative to anticipated cash flow, the execution of an operational turnaround for acquisitions, the reaction of the Company's software customers to its expansion into the segment, and the availability of additional capital to grow the segment beyond the existing operations. There can be no assurances that sufficient capital will be available to the Company on acceptable terms, if at all.

The revolving debt facilities supporting the Company's existing construction and industrial equipment rental and distribution operations, secured by the appraised value of the their respective equipment rental fleet, subjects the Company to market fluctuation risk related to the value of its rental fleet. If the market value of used equipment were to fall faster and further than management expectations, the Company would be at risk of having an insufficient borrowing base securing its debt. This would result in a default under the facility if the Company were not in a position to cure the default.

A significant portion of the Company's debt is subject to interest rate risk due to the fact the rate charged is fully floating tied to LIBOR. At present, the Company does not employ an interest rate hedge to mitigate this risk. Management may elect to do such in the future. There can be no assurance that a sufficient hedge could be procured to fully mitigate this risk.

NOBLE IRON INC.

Management's Discussion & Analysis for the Three and Nine Months Ended September 30, 2015

The construction and industrial equipment rental and distribution industry has demonstrated year over year revenue growth surpassing the most recent rate of gross domestic product in the United States, where the Company's rental business is transacted. Should the current rate of construction and industrial equipment rental growth in the United States stagnate, or should the United States enter a recessionary period with a prolonged decline in construction activity, the Company may lack sustainable revenue growth needed support its debt obligations and capital expenditure plan.

Outstanding Share Data:

The Company has authorized 100,000,000 preferred shares without par value, issuable in one or more series as well as an unlimited number of common shares without par value. As of the date of filing this MD&A, the Company had 27,417,479 common shares issued and outstanding. There are no preferred shares outstanding as of the date of filing.

The Board of Directors ratified, confirmed, and approved a Restricted Share Plan that was adopted effective June 10, 2014. A maximum of 1,000,000 of the Company's shares are available for grant under the Restricted Share Plan. As of the date of this filing Noble Iron had no restricted shares issued. Further information can be found in the 2014 Annual Financial Statements.

Subsequent Events:

At the end of October 2015, the Company launched FleetLogic, a mobile application for service and maintenance of equipment at remote locations.

On October 5, 2015, the Company granted 610,000 options to Directors and one employee.

The Company confirmed the early termination of the leases for its Riverside and Ventura locations, the former sites in Southern California, effective October 1, 2015 and November 2, 2015, respectively. The early termination will result in savings of \$0.04 million (approximately \$0.03 million US as at September 30, 2015) and \$0.2 million (approximately \$0.17 million US as at September 30, 2015) for the respective leases.

Additional information relating to the Company is available on SEDAR at www.SEDAR.com.
